Resumo

A Ecologia Humana tem uma inequívoca origem marcada no tempo e na geografia: a Escola de Chicago da segunda década do século XX. Centrada nas estreitas relações entre Sociosfera e Ecosfera, as quais se revestem de uma constante mutabilidade, a atual Ecologia Humana é uma área imbuída de forte vitalidade, com intensa produção científica e frequentes encontros entre investigadores. Este artigo começa por fazer uma revisão breve dos artigos científicos publicados em revistas da especialidade desde o início do século XX até 2009, e prossegue para uma análise estatística simples em que se destaca a sistematização das referências listadas por ano e país de publicação, subtema dentro da Ecologia Humana e área de formação académica dos seus autores.

Palavras-Chave: Ecologia Humana, literatura cinzenta, artigo científico

Abstract

Human Ecology has an unequivocal origin booked in time and in geography: the American “School of Chicago”, in the twenties of twentieth century. Focused on the close relations among Sociosphere and Ecosphere, which are armed with permanent mutability, current Human Ecology is a scientific field of great vitality, with intense scientific production and frequent investigator meetings. This paper begins by briefly reviewing scientific papers published in the specialty reviews from the beginning of the twentieth century to 2009, and follows with a statistical analysis where all references are ordered by year and country of publication, theme and academic field of its author.

Keywords: Human Ecology, grey literature, scientific paper

I. Introdução

1.1. É comumente aceite que a Ecologia Humana nasceu nos anos 20 do século passado, no âmbito da Ecologia Urbana de um conjunto de autores, suas teorias e obras conhecidos como “A Escola de Chicago”. Este grupo de sociólogos e urbanistas - onde se destacam R. Ezra Park, Ernest Burgess e Robert D. McKenzie – procurava estudar as mal conhecidas relações sociais no seio de uma população condicionada pelas crescentes pressões demográficas daquela cidade americana, caracterizadas por fluxos migratórios e rotação de habitantes inéditos (Hawley, 1986). Numa sociedade global crescentemente mais urbanizada, populosa e heterogénea, o domínio da Ecologia Humana sofreu uma contínua evolução na produção de conhecimento sobre o ser humano e as relações que cimenta com o meio envolvente, seja ele natural ou artificial. Área interdisciplinar por excelência, torna-se um desafio considerável delinear os seus limites conceptuais, já que existem muitos outros campos científicos, sob as mais variadas designações, focados na relação ser humano – ambiente

Um longo caminho trilharam também os profissionais desta área científica dentro dos meios académicos internacionais, quer americanos quer europeus e australianos, até ao estabelecimento, em 2010, da Charte de l’Ècologie Humaine, emanada do Congresso Internacional do Certificado Internacional de Ecologia Humana, com sede em Bruxelas. Embora de contornos pouco específicos, a Carta acentua as dimensões espacial e temporal e define os princípios gerais da disciplina:

Elle considère les interactions entre les écosystèmes et le système social. Les écosystèmes se composent d'un ensemble d'éléments biotiques (incluant l'homme) et abiotiques (incluant les constructions humaines).

L'écologie humaine plus qu'une discipline est une attitude scientifique qui à travers une approche pluridisciplinaire des problématiques complexes liant l'Homme et ses environnements vise à apporter une meilleure compréhension des situations passées et actuelles, afin d'envisager le futur.

Il en résulte que les interactions étudiées se rapportent davantage à un environnement « vécu » qu'à un environnement au sens écologique. L'écologie humaine doit ainsi se situer aux interfaces des sciences de la Vie, des Sciences de la Terre et des Sciences Humaines.

Vários países europeus, incluindo Portugal, pertencem à rede de formação complementar entre as ciências humanas e as do ambiente. O ensino universitário nacional da Ecologia Humana consta de cursos de mestrado e doutoramento, neste momento ministrados a nível nacional apenas na FCSH / UNL, após a suspensão do mestrado na Universidade de Évora.

1.2. Apesar dos muitos graduados e da antiguidade dos cursos de Mestrado, não existe em qualquer das faculdades envolvidas uma bibliografia sintetizada, quer nacional quer internacional, sobre esta área científica integrada. Foi, assim, objetivo deste trabalho “tomar o pulso” à produção científica nacional e internacional na área da Ecologia Humana, reunindo e sistematizando um conjunto de referências de *papers* científicos ao dispor nas principais bases de dados nacionais e estrangeiras até ao ano de 2009. Aplicou-se um tratamento estatístico simples que nos esclarece sobre os subtemas onde se produziu mais material científico no período indicado, bem como a distribuição geográfica por países da sua publicação e área de formação base dos seus autores e ainda a distribuição da publicação científica desde o início do século XX.

A maior dificuldade encontrada foi, como referido no ponto anterior, a delimitação do âmbito da própria Ecologia Humana, cujos limites conceptuais deveriam orientar a pesquisa. A sua sobreponibilidade a campos como o Desenvolvimento Sustentável, o Turismo de Natureza, as Alterações Climáticas, as Éticas Ambientais, etc. exigiu a opção de critérios que se descrevem na metodologia seguinte.

II. Metodologia

2.1. O primeiro passo para a delimitação das fronteiras da área científica da Ecologia Humana consistiu na consulta, no *site* da Society for Human Ecology (SHE), de todos os programas das suas conferências internacionais entre 2000 e 2010. A partir daí fez-se um levantamento dos grandes subtemas definidos pela SHE na organização dos painéis de comunicação e debate entre investigadores, cujo resultado é o conjunto apresentado no Quadro 1. A designação em inglês é fiel à que consta daqueles programas. Os subtemas que não surgem com designação em inglês não figuravam expressamente nos programas, tendo sido inferidos de alguns títulos de comunicações.

Quadro 1 – Subtemas da Ecologia Humana usados para organização das Conferências da Society for Human Ecology (SHE) entre 2000 e 2010

- Alterações Climáticas (*Climate Change*)
- Ambientalismo e Ecologismo
- Áreas Protegidas
- Ambiente Urbano / Ecologia Urbana (*Urban Environment / Urban Ecology*)
- Biografia e História Ambiental (*Environmental Biography and History*)
- Conflito Ambiental e Guerra (*Environmental Conflict and Warfare*)
- Conhecimento Local e Tradicional Popular e Indígena (*Traditional and Indigenous Knowledge*)
- Consumo e Qualidade de Vida (*Consumption and Quality of Life*)
- Democracia e Cidadania (*Democracy and Public Participation*)
- Desenvolvimento Sustentável / Sustentabilidade (*Development / Sustainability*)

- Direito Ambiental/Ecológico (*Law and Environment*)
- Ecologia da Saúde / Saúde Ambiental (*Environmental Health*)
- Ecologia Cultural e Ecologia Social
- Ecologia Humana Estrutural (*Structural Human Ecology*)
- Ecologia do Saber e Holismo (*Wisdom Ecology and Holism*)
- Economia Ambiental/Sustentável e Green Business (*Ecoeconomics / New Economics*)
- Eco-semiótica (Eco-semiotics)
- Ecoturismo / Impactes do Turismo (*Ecotourism / Impacts of Tourism*)
- Educação para a Ecologia Humana / Formação em Ecologia Humana (*Human Ecology Education and Postgraduate Education ...*)
- Epistemologia da Ecologia Humana (*Human Ecology Epistemology*)
- Ética Ambiental / Ecofeminismo / Género e Ambiente (*Gender ...*)
- Fé e Religiões e Ambiente/Ecologia (*Faith, Religion and the Environment/Ecology*)
- Filosofia e Ecologia (*Philosophy and Ecology*)
- Fome e Pobreza
- Floresta, Fogos e Agroecologia (*Forestry, Fire Human Ecology and Agroecology*)
- Gestão da Vida Selvagem (*WildLife Management*) /
- Globalização
- Justiça Ambiental (*Environmental Justice*)
- Literatura/Artes e Ambiente/Ecologia (*Literature / Arts and the Environment/Ecology*) / Ecocrítica (*Ecocriticism*)
- Migrantes e Refugiados do Ambiente
- Mobilidade Sustentável (*Sustainable Mobility and Transport*)
- Paisagem (*Landscape and Heritage*)
- Pescas (*Fishery*)
- Política Ambiental e Governança (*Environmental Politics and Governance*)
- Poluição Cultural e Ambiental (*Environment and Cultural Pollution*)
- Psicologia e Comportamento Ambiental (*Environmental/Conservation Psychology / Behavioural Ecology*)
- Recursos Naturais (Água, Energia,...) (*Natural Resources (Water, Energy,...)*)
- Segurança Humana e Catástrofes (*Human Safety / Security ...*)
- Sistemas e Gestão Costeiros (*Management and Coastal Systems*)
- Sociologia Ambiental / Antropologia Ecológica
- Vulnerabilidade Humana (*Human Vulnerability*) / Adaptação/Integração/Resiliência Humanas (*Human Adaptation/Integration/Resilience*)

2.2. A pesquisa de referências bibliográficas de artigos científicos foi efetuada através dos descritores (em português, inglês e francês): “Ecologia Humana”; “Ecologia do Homem”; “Ambiente/Ecologia e Sociedade”; “Natureza e Ser-Humano/Homem””; e “Ecossistemas Humanos”. Seguiu basicamente três tipos de fontes:

1) Serviços de pesquisa de literatura cinzenta (teses de doutoramento, mestrado, e artigos científicos), incluindo repositórios e bases de dados bibliográficas nacionais e internacionais de faculdades, centros de investigação, bibliotecas, ONGs, etc.; 2) Listas

de bibliografia de consulta de vários livros de divulgação sobre Ecologia Humana e temas relacionados e nela incluídos; e 3) Programas das conferências SHE entre 2000 e 2010, a fim de retirar comunicações eventualmente passadas a *paper* e com *abstracts on line*.

2.3. Os resultados da pesquisa encontram-se coligidos em três tabelas de consulta rápida (Anexos 1, 2 e 3). Estão organizados por ordem decrescente de ano de publicação (Tabela AC I), e por ordem alfabética de título (Tabela AC II) e de autor (Tabela AC III). As células com indicação “o” são aquelas para as quais o resultado da pesquisa foi nulo ou inconcludente.

2.4. Dada a grande diversidade da “Área de formação” dos autores, houve necessidade de agrupar aquelas com menor frequência, de acordo com o explicitado na análise dos resultados. Por exemplo, a Teologia está incluída na Filosofia, a área económica inclui a Economia geral, Economia agrícola ou rural e a Economia ambiental.

As referências a sombreado são aquelas que têm incluído no título a expressão “Ecologia Humana”.

Adotou-se a notação da referência bibliográfica próxima da APA (American Association of Psychology), com um destaque a *bold* e para o título.

III. Análise estatística do conjunto de *papers* científicos

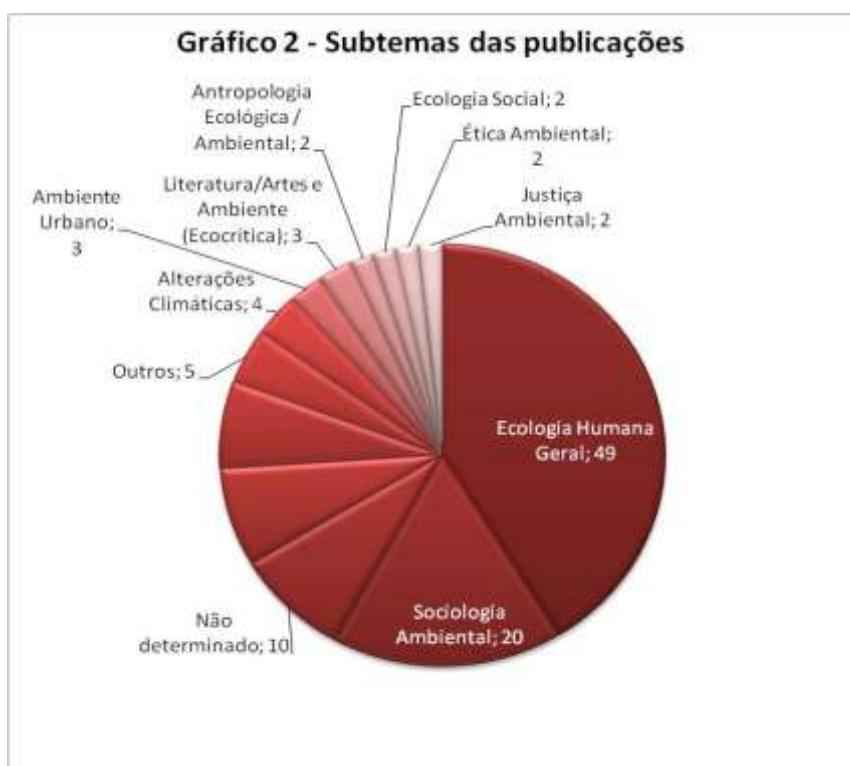

3.1. No total, dos artigos científicos foram listados 121 títulos, dos quais 120 desde a década de 20 do século passado até 2009. O gráfico 1 mostra como a partir desta década dos alvores da Ecologia Humana se registou o impulso da produção científica na área, só ultrapassada pelas décadas de 80 e 90. Apesar de todo o século passado ser profícuo em material científico, uma parte significativa, cerca de um terço, dos artigos listados foram publicados já no século XXI, numa distribuição relativamente uniforme ao longo do tempo, num total de 47 títulos.

3.2. Outro aspecto importante é o da distribuição dos artigos pelos subtemas identificados no Quadro 1. O preenchimento de respetiva coluna nas Tabelas em anexo é necessariamente insuficiente e inexato, uma vez que a presente pesquisa não acedeu aos respetivos conteúdos. A maioria surge por mera inferição a partir do título, que pode ser menos ou mais óbvia; naqueles que não facilitam essa dedução a célula apenas regista um “0”. O apuramento exato e fiável dos subtemas inerentes a cada artigo exigiria no mínimo uma leitura do respetivo *abstract*. O objetivo foi apenas criar uma coluna que mostrasse facilmente a variedade de subtemas de ecologia humana tratados em artigos científicos.

Foram identificados dezassete temas, em número muito inferior aos 42 apresentados no Quadro 1. O tratamento estatístico desses resultados figura no Gráfico 2. É notória a dominância de artigos de conteúdo mais geral dentro da Ecologia Humana e do peso da produção científica subordinado ao tema da Sociologia Ambiental. Também a subárea da saúde ambiental assume algum relevo no conjunto. Optou-se por agrupar a grande variedade de temas detetados em apenas 13, integrando em alguns destes aqueles que surgiram na pesquisa com frequência igual a 1. Assim:

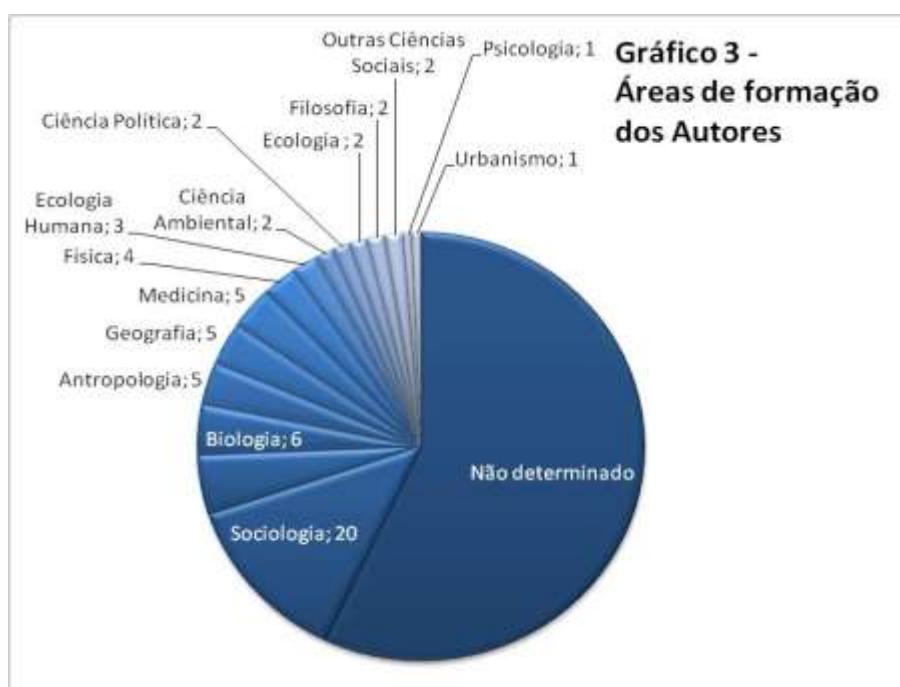

- O subtema “Saúde ambiental” inclui “Ecologia da Saúde”;
- “Ética ambiental” inclui “Género e ambiente”; e
- A categoria “Outros” engloba “Educação/Ensino da Ecologia Humana”, “Segurança Humana e Catástrofes” e “Conhecimento Tradicional e Indígena”.

3.3. Foram identificados 135 autores com trabalhos publicados em dezassete países dos cinco continentes: Europa, América, África, Ásia e Oceânia. Desse universo, vinte e quatro (24) são europeus, trinta e oito (38) americanos e menos de uma dezena (9) são portugueses. O panorama bibliográfico da Ecologia Humana é dominado pelos autores e escolas anglo-saxónicos, nomeadamente dos Estados Unidos (35 autores). Para avaliar o percurso e as filiações do pensamento da Ecologia Humana poderá ser útil identificar as formações de base desses autores. Esta informação tem coluna própria nas tabelas. Quando a autoria é múltipla, a informação surge, dentro de uma célula, na mesma ordem dos autores. São variadíssimas as áreas de formação encontradas, oscilando entre as áreas das Ciências Exatas e as Ciências Humanas e Sociais. Verifica-se no Gráfico 3 uma acentuada prevalência da Sociologia, historicamente a “área mãe” da Ecologia Humana, com vinte autores oriundos deste campo, seguida da área económica e da Biologia. À semelhança da análise dos subtemas, também neste caso, e dada a diversidade de resultados encontrados, se optou por integrar algumas áreas de formação com frequência inferior a 3 em categorias próximas. Assim:

- “Economia” inclui “Economia agrícola/rural” e “Economia ambiental”;
- “Biologia” integra “Zoologia” e “Etologia”; - “Filosofia” inclui “Teologia”; e
- “Outras Ciências sociais” inclui “Demografia” e “Ciência social geral” (tal como consta da biografia de determinado autor).

Em mais de metade dos casos não foi possível determinar com precisão as áreas de formação, porque: a) É frequente um autor ter formações acumuladas em áreas científicas variadas ou tão disparem como medicina e medicina veterinária, ou psicologia e zoologia, não ficando claro de que campo científico é de facto oriundo; b) Por vezes, os sites consultados referem as áreas de investigação preferenciais dos autores, mas não assinalam em concreto as suas formações de base.

IV. Conclusão

Os resultados obtidos são um possível ponto de partida para uma pesquisa alargada sobre o que se tem produzido na área da Ecologia Humana ao nível de artigos científicos. A maior dificuldade foi delimitar o âmbito da Ecologia Humana a uma amplitude razoável e praticável. O segundo obstáculo foi manusear a quantidade de títulos obtidos. Necessariamente, à componente objetiva acresceu uma componente de natureza pessoal e inevitavelmente subjetiva. Além disso, uma pesquisa deste tipo começa a desatualizar-se mal fica terminada, à medida que novos pensamentos, estudos e seus resultados vão sendo publicados e difundidos. Uma pesquisa subsequente incidirá sobre a moldura temporal a partir do ano de 2010.

Verifica-se um forte incremento da publicação científica já neste século, com uma parte significativa dos trabalhos listados tendo menos de cinco anos, evidenciando a vitalidade da própria Ecologia Humana. Por outro lado, a variedade de áreas de formação científica dos autores, quase centena e meia e com dominância dos anglo-saxónicos, confirma o carácter transdisciplinar desta área e indica um empenhamento de todas os sectores da comunidade científica para refletir sobre e lidar com os problemas sociais e ambientais contemporâneos.

Também os temas em que a própria disciplina se desdobra abrangem todos os domínios e possibilidades da interação do ser humano com o planeta, desde o conhecimento tradicional indígena até à sociologia e à antropologia ambiental, passando pelo ecoturismo e a relação do Ambiente com as artes.
